

How to Download Google Earth:

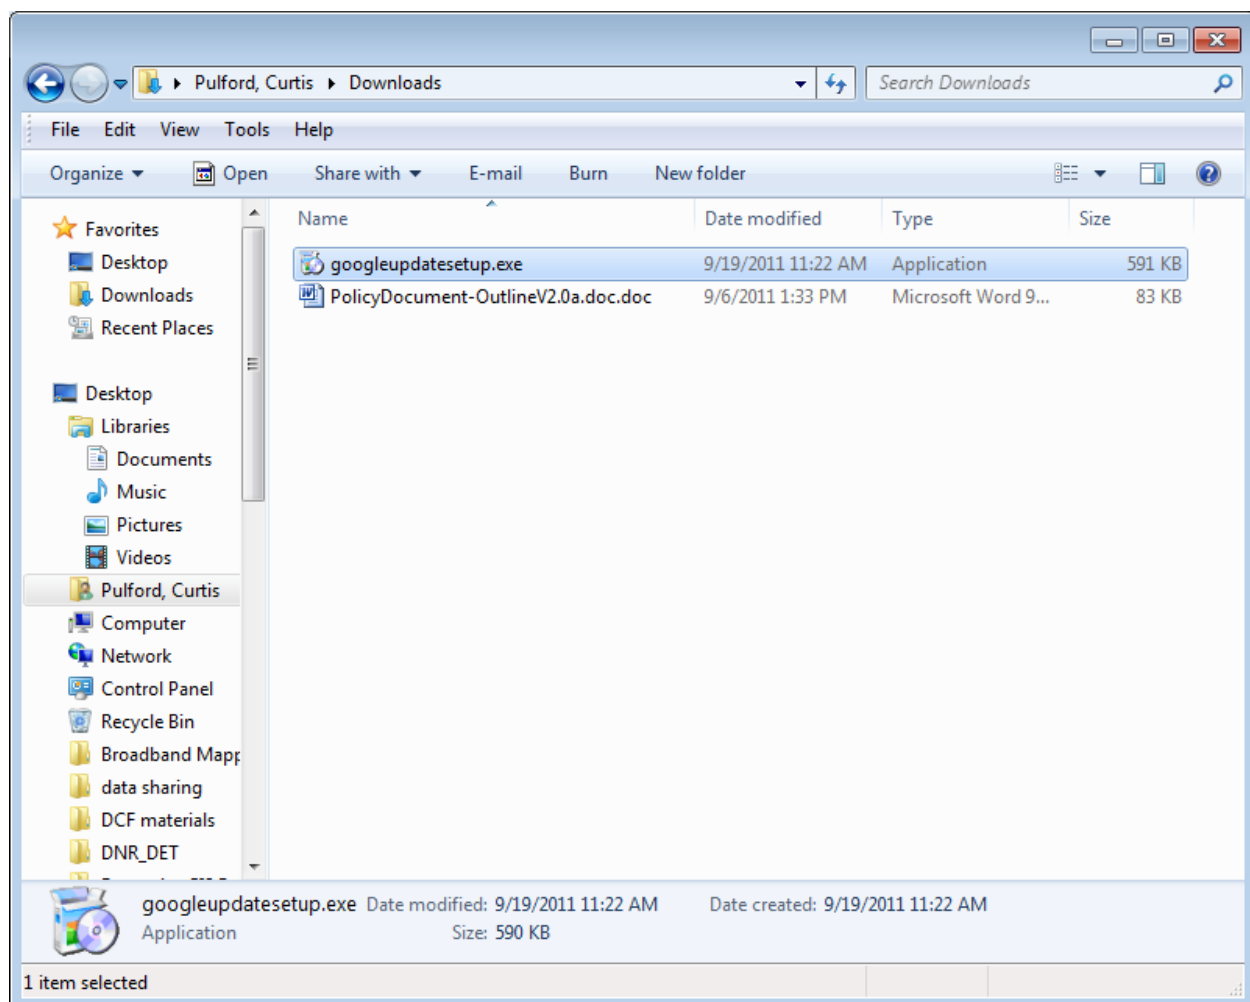

Note the system requirements for using Google Earth on your local machine. Next, click on the link [here](#) in order to download Google Earth. By default, two boxes (in the middle of the page) regarding Google Chrome are checked, but these boxes may be unchecked if the user does not desire to download or use Google Chrome at this time. Once you have read Google Earth's Privacy Policy, click on "Agree and Download" to begin the process of downloading the installation file for Google Earth. (see below)

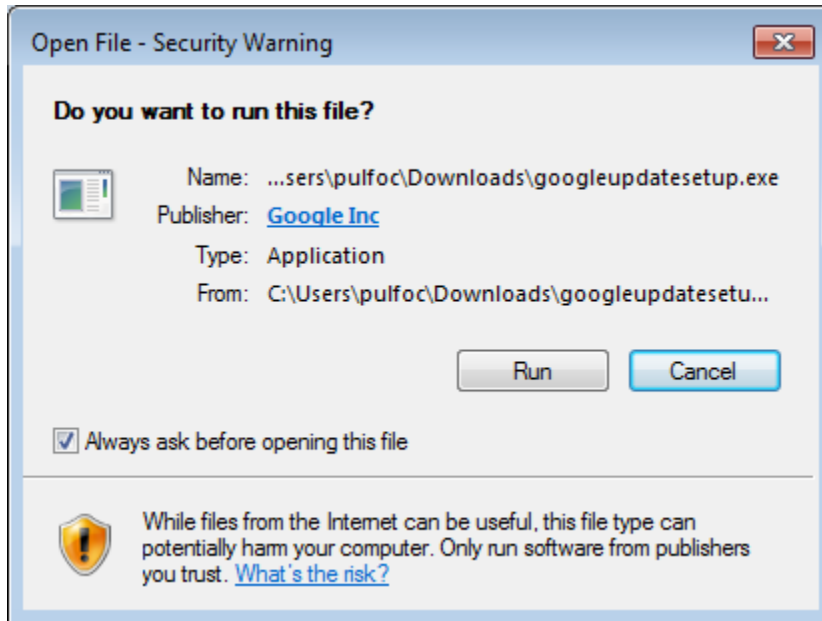

Most users (depending on what web browser you are using) will then see a window asking if you would like to save this file. Click "Save File" to save the Setup file to the default download location associated with your local hard drive.

Using Windows Explorer, go to the default download location on your local machine and doubleclick on Googleupdatesetup.exe.

As shown below, a second window will appear asking if you would like to run this file. Click on “Run” to install Google Earth on your local computer. (see example below)

This completes the installation of Google Earth. For further help in installing or running Google Earth, go to this site: <http://earth.google.com/support/?hl=en> . The Wisconsin Coastal Management Program and the Wisconsin Department of Administration do not offer support for Google Earth software.
